METHOD

1. Idea

Monitoring the changes in a World Heritage cultural landscape is an important element of precautions in order to detect slowly progressing changes of the landscape features and to discuss action to tackle those changes, if necessary. At the same time, it is important to discuss those changes in connection with the Outstanding Universal Value (OUV) of the World Heritage site. Some changes may be negligible, others may impose a threat to the OUV, and addressing and, if possible, tackling them should be made a priority.

The OUV of the World Heritage cultural landscape Fertő-Neusiedler See is formulated as follows:

Brief synthesis

Fertő/Neusiedlersee Cultural Landscape incorporates the westernmost steppe lake in Eurasia. This is an area of outstanding natural values and landscape diversity created and sustained by the encounter of different landscape types. It is situated in the cross-section of different geographical flora and fauna zones as well as wetlands, and is characterised by sub-Alpine mountains, sub-Mediterranean hills, alkaline lakes that dry out from time to time, saline soils, reeds, and shoreline plains. This area, a valuable biosphere reserve and gene bank, is home to a rich diversity of flora and fauna and has been shaped harmoniously for eight millennia by different human groups and ethnically diverse populations. The present character of the landscape is the result of millennia-old land-use forms based on stock raising and viticulture to an extent not found in other European lake areas. This

interaction is also manifested in the several-century-long continuity of its urban and architectural traditions and the diverse traditional uses of the land and the lake. The Fertő/Neusiedlersee Lake is surrounded by an inner ring of sixteen settlements and an outer ring of twenty other settlements.

Two broad periods may be discerned: from around 6000 BC until the establishment of the Hungarian state in the 11th century AD, and from the 11th century until the present. From the 7th century BC the lake shore was densely populated, initially by people of the early Iron Age Hallstatt culture and by late prehistoric and Roman times' cultures. In the fields of almost every village around the lake there are remains of Roman villas. The basis of the current network of towns and villages was formed in the 12th and 13th centuries, their markets flourishing from 1277 onwards. The mid-13th century Tatar invasion left this area unharmed, and it enjoyed uninterrupted development throughout medieval times until the Turkish conquest in the late 16th century. The economic basis throughout was the export of animals and wine. The historic centre of the medieval free town of Rust in particular prospered from the wine trade. Rust constitutes an outstanding example of a traditional human settlement representative of the area. The town exhibits the special building mode of a society and culture within which the lifestyles of townspeople and farmers form an entity. Its refortification in the early 16th century marked the beginning of a phase of construction in the area, first with fortifications and then, during the 17th-19th centuries,

with the erection and adaptation of domestic buildings. The remarkable rural architecture of the villages surrounding the lake and several 18th- and 19th-century palaces add to the area's considerable cultural interest. The palace of the township of Nagycenk, the Fertőd Palace, the Széchenyi Palace and the Fertőd Esterházy Palace are also exceptional cultural testimonies.

Despite the fact that it is a transboundary property, located on the territory of two states, Austria and Hungary, it has formed a socio-economic and cultural unit for centuries, which is outstanding in terms of its rich archaeological heritage created by consecutive civilisations, its rich stock of historical monuments reflecting ethnic diversity, and the elements of its rich ethnographic, geological and mining heritage.

Criterion (v):

The Fertő/Neusiedlersee has been the meeting place of different cultures for eight millennia, and this is graphically demonstrated by its varied landscape, the result of an evolutionary and symbiotic process of human interaction with the physical environment.

Integrity

The inscribed property, located on the Austrian-Hungarian border, is not only characterised by diversity but it has also maintained, in terms of both natural and cultural aspects, its landscape, its socio-economic and cultural features, as well as its land-use forms, the several century-long continuity of its viticulture and stock-raising,

and the rich characteristics of settlement architecture and structure related to land-use. The integrity of the property is based on geological, hydrological, geo-morphological, climatic, ecological as well as regional and cultural historical characteristics.

The landscape of the Fertő/Neusiedlersee has advantageous natural and climatic conditions, which have made it suitable for agricultural cultivation and stock-raising for thousands of years. The water, the reed-beds, the saline fields, alkaline lakes and their remains, the row of hills enclosing the lake from the west with forests and vineyards on top, represent not only natural-geographical component features, but also hundreds of years of identical uses of the land and the lake, making the area a unique example of humans living in harmony with nature. Among the world's saline lakes, the Fertő/Neusiedlersee area is unique in terms of the organic, ancient, diverse and still living human-ecological relationship characterising the lake and society. The characteristic human-made elements of the cultural landscape include the traditional, partly rural architectural character of the settlements around the lake, the settlements' structure, the unity of the homogeneously arranged buildings on squares and streets, and several 18th and 19th century palaces in their landscape settings. The several-century-long viticulture, viniculture and reed management contribute to the continuity of land-use as well as to the continuous use of traditional building materials.

Much of the value of the area lies in its genuinely unchanging qualities of the way of life, the preservation of

vernacular architecture and a landscape based upon a traditional and sustainable exploitation of a limited range of resources. Though tourism is both a change and a catalyst thereof, associated development and insertion of the intrusively modern construction will need to be controlled. Maintaining these characteristics and the conditions of integrity will entail the development and enforcement of guidelines and zoning regulations to ensure that new development does not occur on open land and that it respects the form and scale of traditional buildings.

Authenticity

The overall landscape and scale as well as the internal structure and rural architecture of the towns and villages bear witness to an agricultural land-use and way of life uninterrupted since medieval times. The settlement pattern and occupation of several present-day village sites date to Roman times and earlier. Buildings, walls and vistas have been preserved in many places as well as the ratio of built-in areas. Authenticity is also supported by the continued use of local building materials (limestone, reed and wood). A varied ownership pattern is exemplified by the remarkable rural architecture of the very small villages and by the Fertőd Esterhazy and Nagycenk Széchenyi Palaces, outstanding examples of the landed aristocracy's architecture of the 18th and 19th centuries. The Leitha limestone, found near the lake and quarried from Roman times until the mid-20th century, provided building stone to Sopron and Vienna as well as to local settlements.

Protection and management requirements

The property has been a nature and landscape protection area since 1977, and the protection area has been classified as a reserve under the Ramsar Convention since 1983. The Fertő/Neusiedlersee is also a MAB Biosphere Reserve. In Austria, Neusiedler See-Seewinkel National Park (1993) is within the Ramsar area. The southern (Hungarian) end of the property has been a landscape protection area since 1977 and it became the Fertő-Hanság National Park in 1991; furthermore, parts of the property also belong to the Natura 2000 network. Cultural property, including outstanding monuments and groups of buildings and objects, is protected in Austria by the Austrian Monument Protection Act 1923 (consequently amended several times) and in Hungary by the Act of 2001/LXIV on the Protection of Cultural Heritage. The entire historic centre of the free town of Rust (Austria) and Fertőrákos (Hungary) are under historic area protection. Nature is protected by law on provincial level in Austria.

Land ownership is complex: in the Austrian part less than 1% lies with the State, the bulk belonging to private owners and communities. In the Hungarian part within the Fertő-Hanság National Park, the State owns 86% of the land, with other owners in the property being the local governments, the Church and private individuals.

A detailed zoning plan for the Austrian part of the property has already been approved. A management plan for the whole property has been developed and its implementation is supported by the joint Management

Forum. The Plan has advisory status and plays a strategic guiding and influencing role but is not generally compulsory. Control and monitoring functions are also exerted through the democratic participation and decision-making processes of the public. For conserving the existing cultural properties on both sides of the frontier, responsibilities are shared by federal, provincial and local levels. On the Hungarian part, the review of the Management Plan, based on the Act on World Heritage, will provide detailed regulations that may include zoning arrangements. The Regional World Heritage Architectural Planning Jury assists in the realization of high-quality developments adapted to the values of the property. The Fertőtáj World Heritage Hungarian Council Association is the management body of the Hungarian part of the World Heritage property. In Austria the combined effects of the Monument Protection Act and village renewal regulation within a tourist context encourage sustainable tourism. One of the management challenges consists in the balanced and sustainable development of the transboundary property through harmonising management plans. Short-term tasks include the protection of important views, bearing in mind long-distance visibility due to flat-land characteristics of the wider setting, and in face of development pressures (high-rise buildings, wind turbines, etc.) in the broader setting of the property. Tools to achieve this are planning regulations and World Heritage Planning Juries. Mid-term tasks include maintaining traditional land-use forms and activities adapted to the requirements of contemporary context: safeguarding

the structure, architectural character and extension of the settlements, as well as, increasing the local economy's population retaining capacity. One of the means to attain the latter objectives is sustainable tourism, which needs to be managed in subordination to the interests of the preservation of heritage values. Another challenge consists in mitigating the impact of climate change on the built and natural environment (e.g. the extreme changes in the water level of Fertő/Neusiedlersee).

The following elements of the OUV may be monitored by landscape photography:

- The extension of the water areas of Neusiedler See.
- The quality of reed management.
- The changes in agricultural use (more or less wine-growing, other forms of agricultural land-use).
- The retreat or growth of forested areas.
- The growth of the settlements around the lake.
- The development of tourism infrastructures around and especially directly at the lake.
- The impact of highrises and windmills outside the property on the visual integrity of the site.

The work plan intends to repeat landscape photography every two years, in order to produce a series of standardized images covering wide areas of the protected property which may then be compared. Out of this comparison, the need of further action may be detected and formulated.

The results of landscape photography may be put into relation with the other part of the monitoring

programme, the recurring landscape mapping (part I). This probably won't be done as regularly as taking photographs, since new data (like orthophotos or satellite images) are produced and published less frequently. This is why landscape photography is a good tool to detect changes in the World Heritage cultural landscape at a relatively short notice.

2. Choosing the viewpoints

The list of viewpoints from which standardized photos are to be taken was compiled from a number of sources:

- The list of viewpoints from the built environment guidelines, created by the office stadthand following the production of the first World Heritage management plan (stadthand).
- A list of potential viewpoints put together by Alois Lang, former project manager for Neusiedler See-Seewinkel National Park (Lang).
- Two short strategic documents produced by the Hungarian World Heritage management during the preparation of the currently updated World Heritage Management Plan (proposal for a visibility zone outside the current perimeter of the World Heritage property, mapping of viewpoints and lines of sight) (WH HU).
- Own amendments by the author of the study, partly from public maps, partly during the process of taking the photographs (Schimek).

Out of these sources, the following list of 58 potential viewpoints was compiled. The viewpoints were numbered with preliminary numbers.

In addition to the viewpoints from land, the plan existed to go out on the lake on a boat and take some photos inland. The plan had to be cancelled due to the fact that larger boats could not go on the lake anymore because of the exceptionally low water, and smaller boats would not have made the full distance of around 50 km all around the lake.

3. Photographing

The preliminary viewpoints were visited between 19/09/2022 and 22/09/2022. During the visit, the decision was taken from which viewpoints photographs are to be taken and which ones should be delisted. During the visit, some of the viewpoints were slightly changed due to finding better viewpoints in the vicinity. Some viewpoints were also added during the visit.

The weather was generally speaking feasible for landscape photography. Except for 20/09/2022, when rain showers hindered photography at some viewpoints around Breitenbrunn, the visibility was always at 50 km and more. Work outdoors was made a little peculiar by the heavy winds on 19/09/2022 (up to 80 kph) and on 20/09/2022. Especially on 19/09/2022, it was almost impossible to take notes outdoors, so all recorded data had to be written down in the car shortly after taking the photographs.

The standardized procedure of taking photographs looked as follows:

- All photos were taken with a digital SLR camera (Canon EOS 2000D), equipped with a standard lens with a focal width range from 18 to 55.
- All photos were taken at medium camera resolution.
- The focal width used for the single photographs was recorded straight after taking the photos.
- The direction of photography was preliminarily measured using a compass app on an iPhone and recorded straight after taking the photos.

prel. #	Name	Photos taken / reason for delisting
1	Mörbisch, view platform	photos taken on 21/09
2	Mörbisch, Seebad	photos taken on 21/09
3a	Mörbisch, in the winehills	photos taken on 21/09 location added because of the good view on the village of Mörbisch
3	Mörbisch, in the winehills	photos taken on 21/09
4	Rust, Seebad	delisted: lack of representative lines of sight
5	Rust, at the road	delisted: similar views from #6, no chance to safely park the car along the road
6	St. Margarethen, Roman quarry	photos taken on 21/09 new location close to the parking of the Roman quarry, the Kogelberg/Heimkehrerkapelle viewpoint is not accessible by car (driving banned because of its location in a nature protection zone, rough path going there)
7	Oggau, wine road	photos taken on 21/09 new location a little more down from Silberberg, which would have given worse views on Rust because of the rolling hills and some trees in between
8	Oggau, Hölzlstein	photos taken on 20/09
9	Schützen, Goldberg	photos taken on 20/09
10	Oggau, recreational area	delisted: lack of representative lines of sight
11	Oggau, Vine Bower	photos taken on 21/09
12	Donnerskirchen, church	photos taken on 20/09
13	Donnerskirchen, road to Purbach	photos taken on 20/09 new location chosen because of a good view of Donnerskirchen; Franz Josef view tower delisted because it is too far away from the WH site to take reasonably detailed photos

- All photos were taken standing at the photographer's eye height of about 175 cm. A tripod was not used. This is due to the fact that a tripod would have been too low for many view platforms or watchtowers, plus it would have taken time to adjust the tripod to slopes.

A certain focus was given to speedy work, which will save resources when repeating the photography cycle in the future. Besides the lack of chance to take representative photos, some viewpoints were delisted because they were not accessible by car or because they were closed for the public.

In the end, 41 viewpoints remained for photography.

prel. #	Name	Photos taken / reason for delisting
14	Purbach, Kloster am Spitz	photos taken on 20/09
15	Breitenbrunn, Seebad	photos taken on 20/09 a second location was added
16	Breitenbrunn, Goldberg	photos taken on 20/09
17	Breitenbrunn, CityTower	delisted: no additional landscape value from taking photos from the middle of the town
18	Winden, at the road	photos taken on 20/09
19	Winden, Hackelsberg	photos taken on 20/09 location moved to the modern sculpture "Sonnenanbeterin" at the western end of Hackelsberg because of accessibility
20	Jois, Lake Harbour	delisted: lack of representative lines of sight, the entire area is closed to the public
21	Jois, Ochsenbrunnen	photos taken on 20/09
22	Neusiedl, terrain edge at Wiener Straße	delisted: only one line of sight because of buildings, similar view like #23
23	Neusiedl, Tabor	photos taken on 20/09
24	Neusiedl, Calvary Hill	delisted: similar lines of sight like #23, time-consuming to climb the hill
25	Neusiedl, Seebad	photos taken on 21/09
26	Weiden, cycle path	delisted: exact location unclear, would have given similar lines of sight like #29
27	Weiden, Seebad	delisted: lack of representative lines of sight, the entire area is accessible only after paying an entrance fee
28	Weiden, reservoir	delisted: the reservoir area is fenced in, no access to a good viewpoint around the facility, similar lines of sight like #29

prel. #	Name	Photos taken / reason for delisting
29	Weiden, Winzerkeller	photos taken on 22/09
30	Gols, view platform	photos taken on 22/09
31	Neusiedl, Zitzmannsdorfer Wiesen	delisted: access banned for cars
32	Podersdorf, lighthouse	photos taken on 20/09 location moved from the north beach because the north beach is only accessible when paying an entrance fee, the lighttower viewpoint seemed much more feasible for landscape photography
33	Illmitz, Podersdorfer Hölle	photos taken on 20/09
34	Illmitz, view tower Zicklacke	photos taken on 19/09
35	Apetlon, Rosalia Chapel	photos taken on 19/09
36	Apetlon, at the Zicksee	delisted: lack of representative lines of sight, exact location unclear, difficult to find by car
37	Illmitz, Seebad	photos taken on 19/09
38	Illmitz, National Park Centre	delisted: the watchtower is about to be torn down and will not be replaced
39	Illmitz, Sandeck	photos taken on 19/09
40	Apetlon, Lange Lacke	photos taken on 19/09
41	Apetlon, Grey Cattle Stables	photos taken on 19/09
42	Csapody school Fertőújlak	photos taken on 19/09
43	renaturalization area	photos taken on 21/09
44	Sarród, watchtower Lászlomáyor 2	delisted: tower seems to be torn down, no additional lines of sight compared to #42 and #43
45	Sarród, watchtower Lászlomáyor 1	delisted: tower seems to be torn down, no additional lines of sight compared to #42 and #43

prel. #	Name	Photos taken / reason for delisting
46	Fertőd, castle garden	photos taken on 21/09 Photos taken in the garden instead of the Belvedere of the Esterházy Castle, the castle is only accessible after paying an entrance fee
47	Fertőszéplak, church	photos taken on 21/09
48	Nagyecenk, lime tree alley	photos taken on 21/09
49	Hegykő, watchtower	photos taken on 21/09
50	Hidegség, church	photos taken on 21/09
51	Fertőboz, Gloriette	photos taken on 21/09
52	Sopron, Balf, Castle Church	photos taken on 21/09
53	Sopron, in the winehills between Balf and Fertőrákos	photos taken on 21/09
54	Sopron, Pinty hill	delisted: no access road to the peak, forest on top
55	Sopron, Fertőrákos lake project area	delisted: access to the project area is closed by barriers and security guards about 1 km before the lakeshore
56	Fertőrákos, view tower Kecske-hegy	delisted: access only by bike, view from the tower does not include the lake
57	Fertőrákos, Rock Theatre	photos taken on 21/09
58	Fertőrákos, Mithrász Sanctuary	delisted: access only by bike, view from the sanctuary gives no added value

4. Documentation

Each day after photography, all photos taken were transferred from the camera to the laptop and renamed in a systematic way, storing viewpoint number, direction and focal width in the file names.

The exact location of each of the viewpoints was recorded from Google Maps. The digits after the decimal comma were rounded to five, since this still gives a reasonably exact position of the viewpoints.

For the report, all data were compiled in Adobe InDesign. All photos have a standard size. The smaller maps on each of the photo sheets was taken from Google Earth in the following way:

- Set Google Earth to a resolution of 1000 m on the map scale displayed.
- Take a screenshot.
- Store the screenshot as a PSD file in Adobe Photoshop.
- Insert the PSD in the InDesign frame.
- Resize the picture to a width of 300 mm.
- Move the picture so it shows the desired part of the map.

All photos were carefully examined which elements of the World Heritage site they show. This may be done by zooming in into the photos in a picture viewer. At this occasion, all directions recorded were checked for plausibility. It showed that the iPhone compass tended to give wrong results when close to metal, like on the watchtowers or in the car. Generally speaking, the directions were, if necessary, corrected as closely as possible by compar-

ing the contents of the photos with directions on Google Maps.

Finally, all viewpoints were given new logical numbers. The photo files were renamed accordingly.

As an additional information layer, all viewpoints were also put into screenshots of the Austrian Map, zoom level two (from the top), since it showed that, in many cases, the Austrian Map can help better in finding the viewpoints in nature than Google Maps.

The final list of the viewpoints may be retrieved in the following documentation part.

5. Recommendations for future photo documentation

- All 41 viewpoints may be visited within three days.
- Not all viewpoints might be photographed at an ideal point of time during the day. For example, all viewpoints of the Hungarian south bank show to the north, whereas the two viewpoints around the castles show to the south.
- If re-photographed during September, not the whole day is suitable for photography. The best time span is between 10 a.m. and 5 p.m. Before and after that, the sun is too low, which causes reflections on the lake or on wet surfaces.
- When checking the directions of photography, compare the view through the camera with the photos of the previous photography round(s) in order to achieve photos which are as identical as possible.
- Choose a focal width which is a little lower than the one recorded if possible. This will allow to choose the right parts of the photos during documentation to make them as identical as possible with the photos taken before.
- If the capacity of the computer used for documentation allows for that, choose a larger resolution of the camera than medium. This will help detect landscape changes when zooming into the photos in a picture viewer.

6. Documentation of single landscape elements

In the original plan, also single landscape elements of importance to the cultural landscape, such as single buildings, small monuments or single trees, ought to have been recorded. It quickly showed during the work in the landscape that this is not feasible.

On one hand, this would have meant photographing a huge number of those elements. On the other hand, it may be doubted if a change with such elements will really be of importance to the OUV of the whole cultural landscape. Small monuments are usually kept in good shape. Single trees, on the other hand, may fall or have to be cut for security reasons.

This, by itself, will not pose a threat to the OUV of the whole World Heritage cultural landscape. Summing up, documenting those elements would mean a huge amount of additional work with, probably, little value for World Heritage monitoring.
